

GitLab

Tools for modern developers

GitLab unifies issues, code reviews, CI and CD into a single UI

GitLab v18 provides the following:

- Version control and repository management based on Git
- Continuous Integration/Deployment tool (GitLab CI/CD)
- GitLab Duo: AI tools throughout the entire software development lifecycle (SDLC) **NEW**
- Issue management, bug tracking and boards
- Code Review functionality and Review Apps tool
- Code Quality, code security and compliance capabilities
- Built-in Container registry for Docker images
- Integration with Kubernetes and cloud native applications
- ChatOp tool (Mattermost)
- Auto DevOps
- Rich API and hooks
- Web IDE
- Repository mirroring (DR) and high availability (HA)
- Service Desk (ticketing system)
- Development Analytics
- Performance monitoring
- InnerSourcing and Wiki (version controlled)
- Integration with IDEs like VS Code, IntelliJ, Visual Studio, Eclipse, Koding and more
- Integration with Jira, Jenkins, Kubernetes, Docker, Slack, LDAP, ArgoCD, Artifactory and more
- Self-managed (on-prem), cloud-based (SaaS) or hybrid deployments
- Hosting static websites (GitLab Pages)
